BoardGamesRent

The Board Game Rental Platform

Feed, Search, Filters and Recommendations | Requirements

Overview:

This module manages the core marketplace functionality of BoardGamesRent. It allows users to discover board games available for rent, view detailed information about each listing, and create rental bookings.

The module provides the following functionalities:

- Feed page with recommendations
- Search functionality
- Filtering and sorting of search results
- Viewing detailed information about a board game listing
- Initiating a booking and confirming a booking.

Feature 1: Discover Board Games

Business Value

Users who do not know what game they want can explore available listings and discover interesting board games.

Examples

- A user opens the application and sees a list of board games available for rent.
- A user scrolls through a list of recommended games without searching for a specific title.

Requirements/Acceptance Criterion

ID	Requirement / Acceptance Criterion
DBG-1	Only games marked as active and currently not booked should appear in discovery feed.
DBG-2	Listings displayed in the discovery feed must contain the following information:

	• Board game title • Image of the board game • Rental price per day (positive value) • Location of the listing • Supported number of players
DBG-3	When the number of available listings exceeds the maximum number (10) shown on one page, the system must display pagination controls that allow users to move between result pages.
DBG-4	The discovery feed will be divided into two sections: “Available Tonight” and “Others”.
DBG-5	The “Available Tonight” section must display all listings available for rent starting today and continuing through the next day.
DBG-6	The “Others” section must display all remaining available listings without a specific ordering requirement.
DBG-7	Users can select a listing to access additional details.
DBG-8	Selecting a listing in the discovery feed must open the detailed listing page for that board game.
DBG-9	If no listings are available, an empty state message should be displayed.
DBG-10	Discovery feed must be accessible without authentication.

Feature 2: Search for Board Games

Business Value

Users who already know the game they want to rent need a fast way to find it. Without search functionality, visitors would need to manually browse through many listings. Providing search capabilities allows visitors to quickly locate specific board games.

Examples

- A user searches for “Monopoly” to find listings for that game.
- A user searches for a game to rent on a specific date. • A user searches for a game available in Cluj-Napoca.
- A user searches for a game that currently has no available listings.

Requirements / Acceptance Criterion

ID	Requirement / Acceptance Criterion

SBG-1	A user can search for board games using one or more search fields (title, location, date range).
SBG-2	A search is executed when the user clicks the search button.
SBG-3	The search must support keyword matching based on the board game title.
SBG-4	Search must support partial and case-insensitive matching of keywords.
SBG-5	When a user provides multiple search criteria, results must match all provided criteria.
SBG-6	Search results include only board games that are available (not booked).
SBG-7	Search results may include multiple listings for the same board game if different users have listed the game.
SBG-8	When the number of available listings exceeds the maximum number (10) shown on one page, the system must display pagination controls that allow users to move between result pages.
SBG-9	If no listings match the search, a message informing the user is displayed.
SBG-10	Users can select a search result to view additional details.
SBG-11	The search function must be accessible without authentication.

Feature 3: Filter and Sort Board Game Listings

Business Value

As the number of listings increases, users need ways to narrow down results to find suitable games more efficiently. Filtering and sorting improve the user experience by allowing users to focus on listings that meet their preferences.

Examples

- User filters board games at a price range.
- A user filters board games that support at least 4 players.
- A user filters board games by selecting preferred dates range. • A user sorts results from the lowest price to the highest price.
- A user sorts results from the highest price to lowest price.

Requirements / Acceptance Criterion

ID	Requirement / Acceptance Criterion
FS-1	Users can apply filters to narrow down the list of board game listings.
FS-2	The system must support filtering by price range.

FS-3	The system must support filtering the games by the number of players.
FS-4	Filters must only be applied to listings currently included in the search results.
FS-5	When one or more filters are applied and the user confirms, only listings matching all selected filter criteria must be displayed.
FS-6	Filtered results must be updated only after the user presses the “Apply filters” button.
FS-7	Users must be able to remove individual filters and return to the broader result set.
FS-8	Users must be able to clear all applied filters and return to the full search or discovery results.
FS-9	If no listings match the selected filters, an appropriate message must be displayed.
FS-10	Unauthenticated users can apply filters.
FS-11	Users can sort listings by price (Low to High or High to Low).
FS-12	Users can sort listings by distance from their current city (nearest cities to farthest cities).
FS-13	Sorting must only be applied to listings currently included in the search results.
FS-14	Sorting by price can be available for unauthenticated users.
FS-15	The search bar automatically recommends Romanian cities as the user types.
FS-16	When "Closest to me" is inactive, the app restricts search results to show only games located in the exact city entered.
FS-17	When "Closest to me" is active, the strict city filter is bypassed. The app displays all games matching the other active filters, sorted from closest to farthest relative to the entered city.
FS-18	If the user selects "Closest to me" while the location search bar is empty, an error message appears prompting them to enter a city.
FS-19	If the entered text does not match any recognized city, the app ignores the location rules and displays results based purely on the other active filters.
FS-20	Sorting is applied to the full result set, with pagination updated accordingly.
FS-21	Sorting must reorder the currently displayed listings without removing any listings that match the active search and filter criteria.

Feature 4: View Board Game Listing Details

Business Value

Users must be able to evaluate whether a board game listing meets their needs before renting it. Visitors must be able to access a listing's additional details before deciding to rent the game.

Examples

- A user opens the listing page to see a description of the game.
- A user views the rental price and game image.
- A user views details about the renter.
- A user checks additional information before deciding to rent the game.

Requirements / Acceptance Criterion

ID	Requirement / Acceptance Criterion
LDP-1	Users can select a board game listing to view its detailed information.
LDP-2	The listing details page must display the following information: • Board game title • Description • Images • Rental price per day • Location • Supported number of players • Owner information • Availability information
LDP-3	The displayed information must correspond to the selected listing.
LDP-4	Users must be able to select a rental period based on available date periods.
LDP-5	The non-available date periods will be displayed with red.
LDP-6	The system must calculate the total rental price based on rental price per day and selected rental period.
LDP-7	When the rental period is changed, the total price must be updated accordingly.
LDP-8	Users must be able to navigate back to the previous page (search or discovery feed).
LDP-9	If listing details cannot be retrieved, an error message must be displayed.
LDP-10	Unauthenticated users can view listing details.

Feature 5: Initiate and Confirm a Booking

Business Value

The main purpose of the application is to support the rental of board games. This requires enabling users to initiate and confirm bookings for listings that are available, ensuring a complete and reliable rental process.

Examples

- A user selects a board game listing and chooses to rent it.
- A user changes the rental dates.
- A user confirms the booking details.
- A booking is successfully created for the selected board game.

Requirements / Acceptance Criterion

ID	Requirement / Acceptance Criterion
BG-1	Users can initiate a booking request from a listing details page.
BG-2	Only authenticated users are allowed to initiate and confirm a booking request.
BG-3	Users must select a rental start date and end date before confirming a booking.
BG-4	The system must validate that the selected rental period is available for the listing.
BG-5	Booking requests can only be created for listings that are currently not booked.
BG-6	The system must calculate the total booking price based on rental price per day and selected rental period
BG-7	The system must display a booking review page containing all booking details before the user can confirm the booking request.
BG-8	The review page must display the listing owner's details.
BG-9	The review page must include a "Chat" button to contact the listing's owner.
BG-10	The review page must include a "Confirm & Pay" button to finalize the booking request .
BG-11	Users must explicitly confirm the booking request before it is finalized.
BG-12	If the selected dates are no longer available at the time of confirmation, the booking must be rejected, and the user must be informed.
BG-13	If a non-authenticated user attempts to perform a booking, the user will be redirected to the login/signup page.

BG-14	If the booking cannot be completed due to a system error, an error message must be displayed.
BG-15	After the user confirms the booking, the system must send the booking request to the listing owner.
BG-16	When the booking request is sent successfully, the system must display a confirmation message informing the user that the request has been sent to the owner.
BG-17	After displaying the confirmation message, the user will be redirected to the discovery feed page.
BG-18	If the request fails to be sent, an error message will be displayed to the user.
